

LO-TUNNEL CLOCHE SYSTEM

Beat the Seasons

A wide range of crops grown in New Zealand benefit by being protected from adverse weather conditions. The ease of erection, and proven benefits of the **Kerilea Lo-Tunnel Cloche System**, makes it the obvious choice for growers needing strong early spring growth in field crops. The crop is protected in its own micro-climate, free from wind, rain, and light frost. This normally gives a six to eight week harvest advantage resulting in **increased profits** to the grower.

Exclusive Spring Clips

The Kerilea spring clip system allows for easy tunnel construction. The clip effectively holds all types of cover, while allowing quick easy access to the crop for tending or harvesting. Available in frame sizes to suit a wide range of flower and vegetable crops, it is the ideal system for both spring and autumn crops.

Cover Options

Cover options include plastic sheet, shade cloth, birdnet and micro mesh frost cloth.

Hydroponic Bench Cover

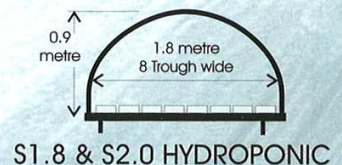

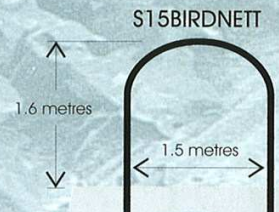

The increasing use of Hydroponics as a growing medium for salad crops has created a need for a simple cover system. The cover keeps rain from diluting the nutrient and increases the temperature during winter. An adaptation to the **Kerilea Lo-Tunnel Cloche** frame has produced a low cost but efficient crop cover while still allowing ease of access.

Customised Cloches

The **Kerilea Lo-Tunnel Cloche System** can be easily customised to suit individual requirements.

The **Kerilea Lo-Tunnel Cloche System** has been used to cover a variety of products including blueberries, table grapes and worm farms.
