

Garden Cloche Systems

(Organic Friendly Products)

Beat the Seasons by up to 3 Months!

The ease of erection and the proven benefits of the Growmax Cloche Systems make it the obvious choice for gardeners giving strong early spring growth. The crop is protected in its own micro-climate free from harsh weather conditions including cold wind and light frost. The **Exclusive Spring Clip** stops the plastic flapping and allows the gardener to locate the plastic in any position for venting and access to the crop.

Cover options:

- **Micro Mesh:** Is a frost cloth(1to 3degrees)plastic-birdnett -windbreak all in one. Micro Mesh is a versatile crop cover knitted from thin but strong UV stabilized polyethylene transparent thread, unlike plastic Micro Mesh allows water to permeate through the mesh and self ventilates while creating a healthy growing environment to promote early growth in young plants and to on grow to maturity. The mesh gives ease of management, just cover and grow without the need to ventilate manually. Micro Mesh with intermitted exposure has been proven to last up to 8 years.
- **Cloche plastic:** Is a standard non UV stabilized cover supplied with all garden series cloche Systems. Unlike Micro mesh its life is 1 to 2 seasons. The plastic will raise the soil temperature quicker than micro mesh and assist with germination from seed promoting strong spring growth protecting the crop from harsh and cold weather conditions.
